

Health Professional Education Programs

Since 1972, the *Maryland Poison Center* has provided health care providers with **assistance in treating poisonings and overdoses**. Not only does the poison center provide telephone consultation in poisoning emergencies, but we are also an educational resource for health professionals. Our goal is to improve the quality and effectiveness of care provided to patients by offering education programs for physicians, nurses, physician assistants, EMS providers, pharmacists, and health professional students.

Health professional education programs are led by MPC pharmacists, nurses, and physicians who are trained and nationally certified in toxicology. Many topics are offered. Choose one or more topics from the list on the back or ask about another topic you are interested in. We request a minimum of 10 participants and all programs must be arranged at least one month in advance. We will make every attempt to provide a speaker when it is most convenient for your staff.

To schedule a program or for more information, contact:

Jimmy Leonard, PharmD, DABAT
Assistant Director
Maryland Poison Center
220 Arch Street, Office Level 1
Baltimore, MD 21201
